

AGC of America, supported by a Susan Harwood Federal Grant, is pleased to offer:

Fall Prevention in Construction Safety Training

Free to All Attendees

Program Description:

Construction workers make up approximately five percent of the country's workforce but account for an average of 19% of all job-related fatalities each year. In addition, falls account for the greatest number of fatalities in the construction industry, especially among small businesses and businesses with Hispanic workers. Over the past 10 years, at least, an average of 371 workers were killed from falls, slips, and trips, and fall protection violations continue to be among the most cited standards in the construction industry, consistently topping the list of OSHA's most frequently cited violations. **AGC of America is pleased to offer this NO-COST one-day training program based on OSHA standards and best practices to answer the need for quality training within the industry. Continuing education credits are available for this course.**

Who Should Attend?

- » Company Officers
- » Estimators
- » Managers
- » Project Managers
- » Supervisors
- » Foremen
- » Contractors

What Will I Learn?

- » Fall Protection Statistics
- » OSHA Standards for Fall Protection
- » How to Identify Fall Hazard Locations
- » Selection and Criteria of Fall Protections Systems and Equipment
- » Fall Protection Training Requirements

Training Date and Time: *Select One*
